DOGWALK³

Safety Note:

Walking on a dog ramp is very unusual for a dog at the beginning. Especially in case of injuries, illness or in old age. Unsafe reactions and refusal can be the result. Therefore do never force your dog to walk on the ramp!

We recommend the following procedure:

1. Lay the extended ramp flat on the ground. Let your dog walk slowly over the ramp several times so that your dog gets used to it and walks on it alone.
2. Increase the inclination angle slowly and practice leading your dog up and down the ramp. Make sure your dog does not jump or slip off the sides.
3. The ramp is slippery when wet. Therefore the walking surface has been equipped with cavities and transverse strips. Nevertheless be alert that the grip might be considerably reduced. In such a situation walk really carefully. Therefore always secure your dog additionally at the collar!

Care information:

Clean the ramp regularly and remove dirt such as sand, mud or remaining salt (in the winter). A neutral soap solution is well appropriate. Afterwards spray with much water and leave to dry. Then spray some thin grease (e.g.: WD 40) into the lateral guide rails until the ramp can be easily telescoped.

SAFETY NOTE:

Check all screwings regularly for tightness, and check again from time to time. Secure ramp in vehicle against slipping.
