VEHICLE SIZING GUIDE

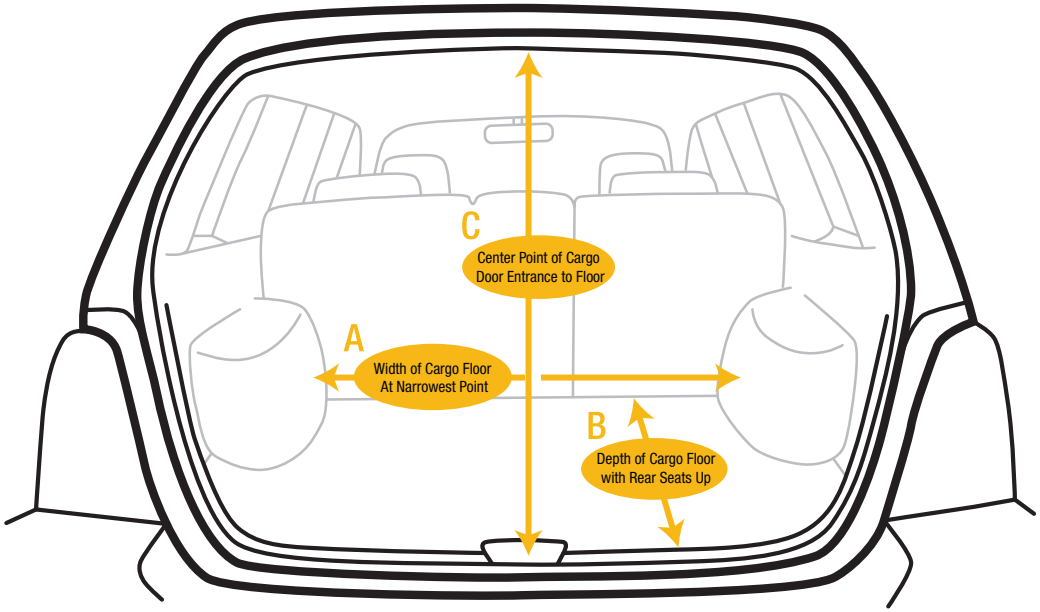

MEASURING YOUR CAR FOR THE VARIOCAGE

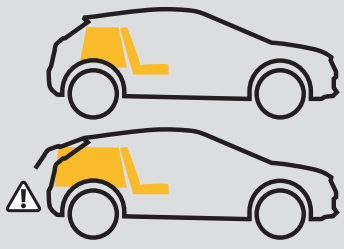

Check to see if your car has a raised sill at the rear cargo entrance. If the sill is raised, you should put something flat under the cage so its doors can open correctly. We recommend rigid foam board insulation to avoid interference with your car's crumple zone. The floor of the cargo area should be flat.

A Measure the narrowest area across the floor of the cargo area.
(Note: The narrowest area is often between the wheel wells or at the bottom of the cargo door entrance.)

B Measure the usable length of the cargo floor from the back seat to the cargo door
(Note: The front & back of the cage are angled to maximize room for the dog(s) at the floor level.)

C Measure the height from the cargo floor to the top center of the cargo door entrance
(Note: Measure from the top center of the door frame straight down to the floor, not at an angle.)

VarioCage is adjustable in length. The slope of the front, back and sides are angled so it can easily fit in a typical cargo area while also providing maximum room for your dog. If you have a cargo door with a steep angle, it may not close properly with the crate fully extended. Consider the final adjusted length of the cage to be sure it will offer enough space for your dog. For shorter cargo areas, a VarioCage Double with the center divider removed will offer more room for 1 or 2 dogs.
